SUMMARY

Laravel / PHP Full-Stack Developer with 4+ years of experience designing and shipping backend systems for booking platforms, multi-vendor marketplaces, and payment-driven applications. Focused on building reliable, scalable APIs and admin tools that hold up under real transaction volume — from dynamic pricing engines to multi-gateway payment flows and live order tracking. Comfortable owning a feature end-to-end: requirements, architecture, implementation, and delivery, while working directly with clients and small cross-functional teams.

EXPERIENCE

Laravel / PHP Full-Stack Developer

May 2025 - Jun 2026

OweBest Technologies | Mobile App Development Company

- Built backend modules and admin functionality for a boat rental and booking platform, including calendar-based boat availability by location, date, and subscription plans — cutting down manual coordination between admins and boat owners.
- Developed dynamic pricing and booking workflows with admin controls for discounts, booking hold/cancel actions, refund handling, and weather-based booking adjustments, improving pricing accuracy and reducing booking conflicts.
- Integrated Stripe, Google Pay, Apple Pay, wallet payments, Google/Apple login, document upload, and invoice generation, streamlining checkout and reducing payment failures across multiple gateways.
- Implemented automated email and notification workflows for booking reminders, review requests, and weather-based cancellation alerts, reducing no-shows and improving customer retention.
- Built REST APIs and admin-side features for a multi-vendor e-commerce and delivery platform supporting multi-language, multi-currency, COD/Paystack payments, push notifications, and order flows — enabling the platform to onboard new vendors without backend rework.
- Worked on delivery tracking and ETA-related functionality, improving order visibility for customers and cutting delivery-status support queries.
- Coordinated with clients to clarify requirements and contributed to planning, execution, and delivery within a small development team, keeping sprints on schedule.

PHP Developer

Aug 2023 - Mar 2025

Codebeans Pvt Ltd | Web Development and Digital Solutions

- Built and maintained Laravel-based client websites and custom backend modules, improving page reliability and reducing manual content-update effort for clients.
- Developed a Shopify-integrated Notify application for restock alerts using Laravel backend, Shopify API triggers, and dynamic email/push notification workflows, helping store admins respond to stock issues faster.
- Implemented custom admin-side functionality and contributed to internal reporting features, giving the team clearer visibility into site and content management.
- Worked on API integrations, feature enhancements, bug fixes, and client-requested changes, improving stability across multiple concurrent web projects.

Web Developer

Mar 2022 - Jul 2023

NLET Initiatives | Dynamic Web Solutions

- Developed dynamic Laravel-based websites and custom backend modules for multiple client projects, reusing components to cut development turnaround time.
- Built a School ERP module for records, attendance, and fee management, replacing manual spreadsheet tracking with a centralized system.
- Built and integrated REST APIs for communication between internal systems, improving data consistency across platforms.
- Collaborated with cross-functional teams on feature implementation, maintenance, and system improvements, supporting smoother releases.

EDUCATION

Master of Computer Applications - Nirwan University, Jaipur

2022 - 2024

Bachelor of Computer Applications - MDS University, Ajmer

2019 - 2022

SKILLS

Languages & Frameworks: PHP, Laravel, JavaScript, HTML, CSS

Backend & Database: REST APIs, MySQL, API Integrations

System Design & Performance: Scalable API Architecture, DB Optimization & Indexing, Caching (Redis, Query Caching), Performance Optimization

Integrations: Payment Gateways (Stripe, Paystack, Google Pay, Apple Pay), Shopify API, Social Login, Push Notifications

Platforms & Systems: CRM, ERP, WordPress

Tools & Workflow: Git, Postman, Agile Collaboration, Client Communication, Team Coordination
